

'We blend world-class fertility care with compassion for our patients'

With the vision of spreading happiness to those in need of fertility services, the team at Vani IVF Centre works towards fulfilling the dreams of many. Dr Kamini Patel wished to bring a revolution in the field of IVF (In vitro fertilization) since 1994.

"She is one of the only female IVF specialists in Gujarat who has a chain of IVF centres across the state. With over 31 years of experience, Dr Patel works with a dedicated team of 100 members at six established centres complete with a lab setup and ART (assisted reproductive technology) registrations. Headquartered in Maninagar, the IVF chain also has branches in Memnagar and Nikol in Ahmedabad, besides Modasa-Aravalli, Himmatnagar-Banaskantha and Vadodara," shares the management team of the centre.

As per the team, the centre's "USP lies in providing infertility treatment with a human touch as they also keep the emotions and sensitivity of their patients in mind". "We are committed to providing personalised attention and care to every patient, ensuring that their journey with us is stress-free and successful," they add.

Dr Patel believes in "having a baby with self-gametes, emphasising the importance of using one's own DNA", which is why "she specialises in working with low AMH and Azoospermia patients," shares the

Dr Kamini Patel

doctor's team.

The centre focusses on providing a broad spectrum of services, with its core expertise lying in IVF. The team is dedicated to customising treatment protocols for each patient, ensuring individualised and optimal care.

"Altruistic surrogacy is a feather in our cap. We have an entire team that works for these treatments as per the ART & Surrogacy Act, 2021. Besides this, we also offer services including stem cell therapy for

couples suffering from Repeated Implantation Failure (RIF), and Repeated IVF Failures (RIF)," shares Dr Patel, adding, "Our team specialises in cases of ovarian regeneration and testicular regeneration."

Adds her team, "Dr Patel runs a programme of oocyte freezing (egg-freezing), wherein women with medical or non-medical reasons can get their eggs frozen, and have the liberty to plan their family at their own time without any pressure. Success rates have always been challenging in this field, but Dr Patel and her team are proud of their reasonably high success rates in the IVF cycles."

"For individuals seeking fertility treatment, the journey is often filled with challenges as well as emotional stress. At our centre, we believe in blending world-class fertility care with a compassionate, human touch to support our patients on

their path to parenthood. For over three decades, our team of highly experienced specialists in obstetrics, gynaecology, and IVF, has been dedicated to providing cutting-edge treatment to patients," says Dr Patel.

She adds, "With a state-of-the-art IVF laboratory and ultramodern facilities, we strive to make every step of this journey as seamless and hopeful as possible for those who wish to become parents."
